

*"Homework:*

- *Perform linear regression on baseball data as shown in lecture (Matlab or Python)*
- *Or, perform linear regression on your own set of data from your potential course project."*

A baseball dataset was gathered from Kaggle on the performance of teams from 1962-2012. Using this dataset, a linear regression was performed on the correlations of BA, OBP, and SLG with the amount of runs scored by those teams.
